Theorem B. If \mathcal{C} is a fusion 2-category with $\text{Obj } \mathcal{C} \cong \text{SVec}$, then the equivalence classes of indecomposable objects of \mathcal{C} form a finite group, which is a central double cover of the group OC of components of \mathcal{C} (see Definition 2.11). In particular, Theorem B asserts that the components of \mathcal{C} do form a group.

We report on gravitational wave discoveries from compact binary coalescences detected by Advanced LIGO and Advanced Virgo between 1 April 2019 15:00 UTC and 1 October 2019 15:00. By imposing a false-alarm-rate threshold of two per year in each of the four search pipelines that constitute our search, we present 39 candidate gravitational wave events. At this threshold, we expect a contamination ...

An equivalent characterization of the (v,w) -weighted (b,c) -inverse is presented in the next result. Lemma 2.4. (Theorem 2.5 and Theorem 2.1, [8]) Let $a,b,c,v,w \in R$. Then the following conditions are equivalent:
