**A Practical Approach to Monoclonal Antibody Imaging**

Bioreactor scale-up is a critical step in the production of therapeutic proteins such as monoclonal antibodies (MAbs). With the scale-up criterion such as similar power input per volume or O<sub>2</sub> volumetric mass transfer coefficient (k<sub>L</sub>a), adequate oxygen supply and cell growth can be largely achieved. However, CO<sub>2</sub> stripping in the growth phase is often inadequate.

**A practical approach in bioreactor scale-up and process ...**

Bioreactor scale-up is a critical step in the production of therapeutic proteins such as monoclonal antibodies (MAbs). With the scale-up criterion such as similar power input per volume or O<sub>2</sub> volumetric mass transfer coefficient (k<sub>L</sub>a), adequate oxygen supply and cell growth can be largely achieved. **Antibody Engineering A Practical Approach Practical ...**

Antibodies raised by peptides have become essential tools in life science research. Virtually all phospho-specific antibodies are now produced using phosphopeptides as antigens. Typically, 5–20 mg of peptide is enough for antipeptide antibody production.
