HL Topic 9: Plant biology - Studynova

Plant cells vary in size from about 7 μm —the diameter of dividing cells at the tips of roots and shoots—to fiber cells a few micrometers wide but a meter or more in length. Most plant (and animal) cells are between 10–100 μm and thus too small to be seen without magnification since human eyes have a resolving power (resolution) of about 100 μm .

Some of the key tissues in plants are: vascular tissues. dermal tissues. ground tissues. In animals, vascular tissue transports blood throughout the body, delivering oxygen, removing waste, creating Olympic athletes, and so on. In plants the tissues that transport things around the plant are called xylem and phloem.
