and other insulated assets. It often takes the form of general corrosion. CUI and CUF are difficult to detect as they are hidden by the protective layers and likely only found when insulation or fireproofing is removed for visual inspection or when a leak occurs, unless an advanced non-destructive testing (NDT) method is used.

Although the extent and resultant cost of corrosion under insulation (CUI) are not known exactly, J. F. Delahunt in "Corrosion Control Under Thermal Insulation and Fireproofing" 1 shows the seriousness of the problem by presenting case histories. These cover deep pitting, as well as general corrosion, that have occurred on galvanized steel tanks under 12-year-old polyurethane foam.
