Engineering Materials Msc. Shaymaa Mahmood V temperature is relatively low and there is no subsequent
quenching. Surface hardnesses as high as 1150 HD are obtainable with 'Nitralloy' steels. Corrosion
resistance of the steel is improved. The treated components retain their hardness up to 500 °C compared
with the 220 °C for case-hardened plain carbon and low- alloy steels. Resistance to fatigue is good. The
process is cheap when large number of components are to be treated.

~~Engineering materials - SlideShare~~

Engineering Materials Msc. Shaymaa Mahmood V toughness, good electrical insulation, and ease of moulding
to shape. It is also a relatively low cost material that is readily available. The metal joining piece
and its clamping screws are made from brass. This metal has been chosen because of its special
properties.

Engineering Materials Msc. Shaymaa Mahmood 10 In practice only hypoeutectic alloys are used. These alloys (carbon content from 2.06% to 4.3%) are called cast irons. When temperature of an alloy from this range reaches 2097 °F (1147 °C), it contains primary austenite crystals and some amount of the liquid phase.
