Bug - Lightning Bug

The Lampyridae are a family of insects in the beetle order Coleoptera with more than 2,000 described species. They are soft-bodied beetles that are commonly called fireflies, glowworms, or lightning bugs for their conspicuous use of bioluminescence during twilight to attract mates or prey. Fireflies produce a "cold light", with no infrared or ultraviolet frequencies.

LIGHTNING BUG - crossword answers, clues, definition ...

Like all other beetles, lightning bugs have hardened forewings called elytra, which meet in a straight line down the back when at rest. In-flight, fireflies hold the elytra out for balance, relying on their membranous hindwings for movement. These traits place fireflies squarely in the order Coleoptera.
