Arthur Holmes's "Principles of Physical geology" is recognized as a seminal work which has influenced generations of geology students from many countries in its first three editions. But in the light of continuing new discoveries from sophisticated geophysical exploration methods, deep drilling in the oceans and on land, and satellite imagery, much of the theoretical aspects now requires substantial revision.

The principles of geography are those that must be met by those involved in any study of this science. Among these principles are the location, the description or the comparison. By using them, a correct development is achieved in any investigation or geographical description. The term geography comes from the Greek words "Gea", which means Earth, and "graf i a", whose meaning is "description".
