Con il nuovo secolo il mondo del lavoro è cambiato profondamente. Al punto che, per chi osserva le relazioni di lavoro, l'aggettivo nuovo è all'ordine del giorno. Occorre allora ridisegnarne completamente la mappa, partendo dal problema della crescente flessibilità, e chiederci dove stiamo andando, quali rotte seguire. Ancor più in Italia dove la flessibilità ha avuto un peso particolare sia per la struttura produttiva, caratterizzata dalla piccola impresa, sia per quella contrattuale, con i tanti contratti «non standard» che sembrano articolare più le diseguaglianze che la flessibilità vera e propria. Si tratta di definire gli spazi di una flessibilità flessibile e quindi di costruire un sistema contrattuale e strategie di rappresentanza più inclusivi, in grado di offrire forme di tutela che facciano fronte al lavoro discontinuo che caratterizza oggi la nostra società.

The successful 1997 strike by the Teamsters against UPS, and the overwhelming support the American public gave the strikers highlighted the impact of contingent work--an umbrella term for a variety of tenuous and insecure employment arrangements such as temping, independent contracting, employee leasing, and some self-employment and part-time or part-year work. This new book contends that contingent work represents a profound deviation from the employment relations model that dominated most of this century's labor relations. It delineates essential features of contingent work from both the worker's and the organization's point of view. Articulating a variety of perspectives from various disciplines, the contributors examine the business forces driving contingent work and assess the consequences of working contingently for the individual, family, and community, taking into account issues of race, class, and gender. They ask how current labor and employment laws need to be rewritten to provide contingent workers with the same comprehensive protections offered to permanent employees. In the final chapter, the editors comment on the status of research on contingent work and chart future research directions.

We develop a model to analyze the implications of firing costs on incentives for R & D and international specialization. The key idea is that, to avoid paying firing costs, the country with a rigid labor market will tend to produce relatively secure goods, at a late stage of their product life cycle. Under international trade, an international product cycle emerges where, roughly, new goods are first produced in the low firing cost country and then move to the high firing cost country. We show that in the closed economy, an increase in firing costs does not necessarily imply a reduction in R & D; it crucially depends on the riskiness of R & D activity relative to production activity. In the open economy, however, an increase in firing cost is much more likely to reduce R & D intensity.

The Treasury's Asset Protection Scheme to protect over £280 billion of Royal Bank of Scotland's financial assets against losses has, so far, only been partially successful in encouraging lending to creditworthy borrowers on the scale originally envisaged. The Scheme, launched in early 2009, initially involved two banks. RBS eventually put £282 billion of assets into the Scheme, while Lloyds Banking Group paid £2.5 billion to exit the Scheme in November 2009 and instead raised additional capital from shareholders. The principal elements of the Scheme, particularly the first loss, were based on a robust assessment of incentives and on as complete information on the underlying assets as were available at the time. As part of the Scheme, Lloyds and RBS agreed lending targets. While both banks met targets for mortgage lending, there was a shortfall of £30 billion against targets for lending to business. Value for money in the longer term will depend heavily on incentives built into the Scheme to encourage good management of assets. Establishing a requirement for RBS to bear the first £60 billion of losses (a 'first loss') was crucial in providing the right incentive for the bank to manage its assets effectively. However, if the first loss is exceeded, RBS will have less financial incentive to avoid further losses although the bank considers it will still have a legal and moral obligation to manage the assets as best it can. The position of taxpayers would be particularly vulnerable if losses were to exceed about £73 billion
