Skeletal muscle fibers are multinucleate cells that are long and thin. A motor unit is a unit that is a combination of a motor neuron and all of its connections with muscle cells. A skeletal muscle twitch is a contraction of an entire muscle. An electrical stimulus is an electrical impulse from the nervous system that tells the muscle to contract.

Alex Estrada Physiology Lab Skeletal Muscle Lab Introduction This lab will demonstrate what happens when you apply electrical stimuli directly to exposed muscle and correlate a muscle contraction. Identify thresholds by increasing the stimulus voltage. Skeletal muscles are composed of cells called muscle fibers. Muscle fibers have one motor neuron, this synapse is the only source of excitation ...

S.keletal muscles are composed of hundreds to thousands of individual cells, each doing their share of work in the production of force. As their name suggests, skeletal muscles move the skeleton. Skeletal muscles are remarkable machines; while allowing us the manual dexterity to create magnificent works of art, they are also capable of generating the brute force needed to lift a 100-lb. sack of concrete.

Complete the following statements: The junction between a motor neuron ' s axon and the muscle cell membrane is called a neuromuscular junction or a 1 junction. A motor neuron and all of the skeletal muscle cells it stimulates is called a 2. The actual gap between the axonal terminal and the muscle cell is called a 3.

Muscle Physiology, Identification & Actions LAB ACTIVITY 5: Motor Units. Skeletal muscles consist of many groups of muscle fibers controlled by a single motor neuron. Each group is called a 1) Since the muscle fibers are scattered throughout the muscle, stimulation of a single motor unit causes a weak contraction of the entire muscle.
